Reverse Image for Iron-On Transfer

Pattern Transfer

Light Table/ Window:

Place the pattern on a light table or tape it to a bright window. Position the pattern on top and secure in place. Trace the pattern onto the fabric using a water or air soluble transfer pen. A regular pencil will also work if you are transferring to light colored fabric.

Iron On Transfer Pencil or Pen:

This method uses an iron on transfer pen or pencil which can be found at most fabric/sewing stores. To use an iron on transfer pen you first need to print the REVERSE IMAGE pattern. Trace the pattern with the iron on pencil or pen. Place the pattern, traced side down, on top of your fabric. Press a hot iron on top of the fabric for 5-10 seconds. Do not move the iron around. Gently lift an edge of the fabric to check that the design has transferred before completely removing the fabric.

Dressmaker's Carbon:

Carbon Paper can be found at many fabric stores. It comes in both light and dark colors. To use secure your fabric to a flat surface, cover with a piece of carbon paper and place the printed pattern on top. Trace the pattern using a pencil or fine tipped pen. Press firmly for best results. Remove the printed pattern and the carbon paper to reveal the fabric with the transferred pattern.
